

LagLivLab - starting autumn semester 2021

LagLivLab event Sept 9 - your projects in focus!

We have an agreement with Realfagsbiblioteket to stage an event there with a real audience and live streaming. They will give technical support, but we have to have the content!

- I would like to have 2 volunteers to help us plan this event. Send me an email.
- All three teams should present their work and experience. You have made a unique, new makerspace come to life!
- The four postdocs should present their experience getting the biomakerspace to work.
- The audience should include students, UiOLifeScience director, industry partners and UiO faculty. Who else should we invite? Rector? Deans?

LagLivLab projects autumn semester 2021

- All three project teams should evaluate if the project is worth continuing.
- All LLL team members who want to continue are welcome to do so! All team members leaving LLL will get a certificate of participation that details their efforts.
- Each team should recommend how new many new members should be admitted.
- We need to advertise for new students to participate in LLL.
- Are there any new ideas for projects? How should we find them and choose or reject them?
- I would like to have 2 volunteers to help advertising and getting the projects started.

Insta stories

We will publish your Insta stories on the Insta account @fysikkunioslo.

Hilde Lynnebakken (our communication adviser, hilde.lynnbakken@fys.uio.no) sent you this advice in June:

Jeg vet ikke hvor mye dere har snakket om dette, men jeg tror det kunne fungert fint å presentere hver gruppe i form av en instagram story på 6-7 "slides" (bilder/videosnutter a 15 sekund)

- en blanding av stillbilder og videoklipp av noe som skjer og/eller noen som forteller, med tekst og evt emojis/gifer etc.

Ta gjerne kontakt for å foreslå noe :) Gir gjerne innspill på plan og utkast.

LagLivLab assistants

Haakon Krogrud and Håvard Bjerke will be employed as assistants at LLL this semester. They will be charged with some routine tasks to make sure the cell lab functions and they will train students and oversee work in the labs.

LagLivLab leadership

So far Ørjan, Stefan and I started LLL and I have acted as the leader. I would like to have an active student participation in leading LLL. After all, we started this to give students new opportunities!
